# Definitions

#### General

Product data applies under the following conditions:

- · Three hours storage at ambient temperature followed by 30 minutes warm-up operation
- · Specified environmental conditions met
- Recommended calibration interval adhered to
- All internal automatic adjustments performed, if applicable

#### **Specifications with limits**

#### **Specifications without limits**

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value (e.g. dimensions or resolution of a setting parameter). Compliance is ensured by design.

#### Typical data (typ.)

Characterizes product performance by means of representative information for the given parameter. When marked with <, > or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

#### Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter (e.g. nominal impedance). In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

#### Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

#### Uncertainties

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Device settings and GUI parameters are indicated as follows: "parameter: value".

Typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

# Base unit

# Vertical system

| Input channels                                  | R&S <sup>®</sup> RTH1002   | 2 oscilloscope channels, 1 multimeter  |
|---|--|--|
| input channels                                  | R&S <sup>®</sup> RTH1004   | 4 oscilloscope channels  |
|   | All inputs are floating and fully isolated in lir                              |  |
|   | rating. See figure regarding isolation rating on page 13.                      |  |
| Input impedance                                 |  | 1 MΩ ± 1 %    12 pF ± 2 pF (meas.)   |
| Analog bandwidth (–3 dB)                        | R&S®RTH1002 and R&S®RTH1004  | ≥ 60 MHz   |
| <b>0</b> ( )                                    | R&S <sup>®</sup> RTH1002 with -B221 option and                                 | ≥ 100 MHz  |

| Vertical resolution of overall system           |  | 9 bit  |
| DC gain accuracy                                | offset and position set to zero, after self-alig                               |  |
|   | input sensitivity > 5 mV/div   | ±1.5 %   |
|   | input sensitivity > 2 mV/div to 5 mV/div                                       | ±2 %   |
|   | input sensitivity 2 mV/div   | ±2.5 %   |
| Input coupling                                  |  | DC, AC   |
| Input sensitivity                               | in steps of 1, 2, 4, 5 in each decade  | 2 mV/div to 100 V/div  |
| Maximum input voltage                           | at BNC inputs  | CAT IV 300 V (RMS), 424 V (peak),  |
|   |  | derates at 20 dB/decade to 5 V (RMS)   |
|   |  | above 500 kHz (see figure "Input rating:<br>Maximum signal voltage at oscilloscope |
|   |  | input" on page 13)   |
|   | with R&S <sup>®</sup> RT-ZI10 or R&S <sup>®</sup> RT-ZI11 probe                | CAT IV 600 V, CAT III 1000 V,  |
|   |  | derating in line with probe specification  |
| Position range                                  |  | ±4 div   |
| Offset range                                    | input sensitivity  |  |
|   | ≥ 40 V/div   | 0  |
|   | $\geq$ 1 V/div to $\leq$ 20 V/div  | ±200 V   |
|   | ≤ 500 mV/div   | ±4 V   |
| Offset accuracy                                 | after self-alignment   | ±( 0.5 % ×  net offset  +  |
| <b>,</b>  |  | 0.1 div × input sensitivity + 1.5 mV )   |
|   |  | (net offset = offset – (position × input   |
|   |  | sensitivity))  |

 $<sup>^{1} \</sup>geq 200 \text{ MHz} \text{ (meas.) for input sensitivities} \geq 20 \text{ V/div.}$ 

 $<sup>^2~</sup>$  < 1.75 ns (calculated) for input sensitivities  $\geq$  20 V/div.

| DC measurement accuracy  | after adequate suppression of<br>measurement noise by using high-<br>resolution sampling mode or waveform<br>averaging or a combination of both | ±( DC gain accuracy ×<br> reading – net offset  + offset accuracy ) |
|--|---|---|
| Channel-to-channel isolation<br>(each channel at same input sensitivity) | input frequency < analog bandwidth  | > 40 dB (meas.)   |

# Horizontal system

| Timebase range       |      | selectable between 1 ns/div and 500 s/div |
|----------------------|------|---|
| Channel deskew       |      | ±100 ns                                   |
| Reference position   |      | 10 %, 50 % or 90 % of measurement         |
|                      |      | display area                              |
| Trigger offset range | max. | at least 2 s or 2000 screen widths        |
|                      |      | at most 100 000 s                         |
|                      | min. | right edge of measurement display area    |
| Modes                |      | normal, roll                              |
| Timebase accuracy    |      | ±10 ppm                                   |

# Acquisition system

| Maximum realtime sampling rate     | R&S <sup>®</sup> RTH1004           | 1 channel with 5 Gsample/s   |
|------------------------------------|------------------------------------|--|
|                                    |                                    | 2 channels with 2.5 Gsample/s  |
|                                    |                                    | 4 channels with 1.25 Gsample/s   |
|                                    | R&S <sup>®</sup> RTH1002           | 1 channel with 5 Gsample/s   |
|                                    |                                    | 2 channels with 2.5 Gsample/s  |
| Maximum acquisition length         | at sampling rate of 5 Gsample/s    | 500 ksample  |
|                                    | at sampling rate of 2.5 Gsample/s  | 250 ksample for each channel   |
|                                    | at sampling rate of 1.25 Gsample/s | 125 ksample for each channel   |
| Acquisition modes                  | sample                             | first sample in decimation interval  |
|                                    | high resolution                    | average value of samples in decimation interval  |
|                                    | peak detect                        | largest and smallest sample in decimation interval   |
|                                    | envelope                           | envelope of acquired waveforms;<br>for timebases requiring decimation,<br>peak-detect is used.   |
|                                    | average                            | average of acquired waveforms;<br>for timebases requiring decimation, high<br>resolution is used. Number of averaged<br>waveforms can be power of 2 from 2 to<br>8192. |
| Realtime waveform acquisition rate | max.                               | 50 000 waveforms/s   |

# **Trigger system**

(see also R&S®RTH-B1 mixed signal option)

| Trigger level   | range                    | ±4 div from center of screen   |
|-----------------|--------------------------|--------------------------------|
| Trigger modes   |                          | auto, normal, single           |
| Trigger sources | R&S <sup>®</sup> RTH1004 | CH1, CH2, CH3, CH4             |
|                 | R&S <sup>®</sup> RTH1002 | CH1, CH2                       |
| Hold-off range  | time                     | 8 ns to 10 s, fixed and random |
|                 | events                   | 1 to 1 000 000 000 events      |

| Trigger types |  |   |
|---------------|--|---|
| Edge          | triggers on specified slope (positive, negative or either) and level |   |
| Glitch        | triggers on glitches of positive, in than specified width            | negative or either polaritiy that are shorter or longer |
|               | glitch width   | 200 ps to 5000 s  |
| Width         | triggers on positive or negative inside or outside the interval      | pulse of specified width; width can be shorter, longer, |
|               | pulse width  | 200 ps to 5000 s  |

| TV/video       |  | triggers on baseband analog progressive and interlaced video signals PAL, NTSC, SECAM, PAL-M, SDTV and HDTV broadcast standards  |  |
|----------------|--|--|--|
|                | (SDTV and HDTV require R&S®RTH-K19 option)   |  |  |
|                | trigger events   | all fields, odd fields, even fields, all lines,<br>line number   |  |
| Pattern        | triggors when a logical combination  | on (and, nand, or, nor) of the input channels stays true   |  |
| Fallelli       |  | r, inside or outside a specified range   |  |
|                | pattern time   | 800 ps to 5000 s   |  |
| State          |  | on (and, nand, or, nor) of the input channels stays true<br>ither) in one selected channel; state values may be<br>(requires R&S <sup>®</sup> RTH-K19 option)  |  |
| Runt           | triggers on pulse of positive, nega<br>fails to cross a second threshold   | triggers on pulse of positive, negative or either polarity that crosses one threshold but<br>fails to cross a second threshold before crossing the first one again; runt pulse width<br>can be arbitrary, shorter, longer, inside or outside the interval                |  |
|                | runt pulse width   | 200 ps to 5000 s   |  |
| Slew rate      | and lower voltage levels is shorte   | triggers when the time required by a signal edge to toggle between user-defined upperand lower voltage levels is shorter, longer, inside or outside the interval; edge slopemay be positive, negative or either (requires R&S®RTH-K19 option)toggle time200 ps to 5000 s |  |
| Window         | triggers when signal enters or exits a specified voltage range; triggers also when signal stays inside or outside the voltage range for a specified period of time (requires R&S®RTH-K19 option)                       |  |  |
|                | window time  | 200 ps to 5000 s   |  |
| Data2clock     | two input channels; monitored tim  | triggers on setup time and hold time violations between clock and data present on any two input channels; monitored time interval may be specified by the user with a step size of 800 ps in the range from $-124$ ns to $124$ ns around a clock edge                    |  |
| Serial pattern | triggers on serial data pattern up to 32 bit clocked by one input channel; pattern bits may be high (H), low (L) or don't care (X); clock edge slope may be positive, negative or either (requires R&S®RTH-K19 option) |  |  |
|                | max. data rate   | < 250 Mbps   |  |
| Timeout        | triggers when signal stays high, low or unchanged for a specified period of time (requires R&S <sup>®</sup> RTH-K19 option)  |  |  |
|                | timeout  | 200 ps to 5000 s   |  |
| Interval       | triggers when time between two of<br>negative) is shorter, longer inside<br>(requires R&S®RTH-K19 option)  | consecutive edges of same slope (positive or or outside a specified range  |  |
|                |  |  |  |
|                | interval time  | 200 ps to 5000 s   |  |

# Waveform measurements

(see also R&S<sup>®</sup>RTH-B1 mixed signal option)

| Automatic measurements | total number of active measurements | 4   |
|------------------------|-------------------------------------|---|
|                        | sources                             | sources   |
|                        | R&S <sup>®</sup> RTH1004            | CH1, CH2, CH3, CH4, math, reference   |
|                        | R&S <sup>®</sup> RTH1002            | CH1, CH2, math, reference   |
|                        | time based measurements             | period, frequency, rise time, fall time,<br>positive pulse width, negative pulse width,<br>positive duty cycle, negative duty cycle,<br>delay, phase                      |
|                        | amplitude based measurements        | mean value, RMS value, crest factor,<br>standard deviation, minimum, maximum,<br>peak-to-peak, base level, top level,<br>amplitude, overshoot, preshoot, AC, DC,<br>AC+DC |
|                        | count based measurements            | count positive pulses, count negative<br>pulses, count rising edges, count falling<br>edges   |
|                        | power based measurements            | active power, apparent power, reactive power, power factor  |
| Cursor measurements    | sources                             | analog channels, math and reference waveforms   |
|                        | vertical                            | 2 cursors showing time, time difference<br>and inverse time difference (frequency)  |
|                        | horizontal                          | 2 cursors showing voltage and voltage difference  |
|                        | tracking                            | vertical cursor additionally showing<br>voltage and voltage difference of selected<br>waveform  |
|                        | measure                             | defines gate for automatic measurements   |

# Mask testing

| Sources                           | R&S <sup>®</sup> RTH1004 | CH1, CH2, CH3, CH4, math             |
|-----------------------------------|--------------------------|--------------------------------------|

# R&S<sup>®</sup>RTH-K19

#### Advanced triggering

Additional trigger types:

TV/video: SDTV and HDTV broadcast standards; pattern, state, runt, slew rate, window, data2clock, serial pattern, timeout, interval and protocol. For more details see Trigger system.

# R&S®RTH-K200

#### Wireless LAN

Interface wireless LAN 802.11 b/g/n 2x2, 2.4 GHz Operating modes: access point and client mode Certifications: CE0682

Certification valid for the following countries:

Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hong Kong, Hungary, Iceland, Ireland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey, United Kingdom

For operation in countries that are not listed, it is the sole responsibility of the user to ensure that the above certification is accepted and in line with the applicable laws of those countries.

Rohde & Schwarz does not expressly warrant wireless LAN compliance for countries that are not listed above.

# R&S®RTH-K200US

#### Wireless LAN

Interface wireless LAN 802.11 b/g/n 2x2, 2.4 GHz Operating modes: access point and client mode Certifications: FCC and IC Certification valid for Canada and the United States

For operation outside Canada and the US, it is the sole responsibility of the user to ensure that the above certifications are accepted and in line with the applicable laws of that particular country.

Rohde & Schwarz does not expressly warrant wireless LAN compliance for countries that are not listed above.

# R&S®RTH-K201

#### Web interface remote control

Remote operation via Ethernet port or wireless LAN (requires R&S®RTH-K200 or R&S®RTH-K200US option in addition). Control of the instrument from the web browser on a PC, laptop or handheld device. Full operation of the instrument's touch interface, keys and multifunction wheel via web browser.

| Extended Warranty with Calibration Coverage, one year  | R&S <sup>®</sup> CW1 | office.                   |
| Extended Warranty with Calibration Coverage, two years | R&S <sup>®</sup> CW2 |                           |

#### Extended warranty with a term of one or two years (WE1 and WE2)

Repairs carried out during the contract term are free of charge <sup>4</sup>. Necessary calibration and adjustments carried out during repairs are also covered. Simply contact the forwarding agent we name; your product will be picked up free of charge and returned to you in top condition a couple of days later.

#### Extended warranty with calibration (CW1 and CW2)

Enhance your extended warranty by adding calibration coverage at a package price. This package ensures that your Rohde & Schwarz product is regularly calibrated, inspected and maintained during the term of the contract. It includes all repairs <sup>4</sup> and calibration at the recommended intervals as well as any calibration carried out during repairs or option upgrades.

<sup>&</sup>lt;sup>4</sup> Excluding defects caused by incorrect operation or handling and force majeure. Wear-and-tear parts are not included.

#### Service that adds value

- Uncompromising qualityLong-term dependability

#### About Rohde & Schwarz

The Rohde&Schwarz electronics group offers innovative solutions in the following business fields: test and measurement, broadcast and media, secure communications, cybersecurity, radiomonitoring and radiolocation. Founded more than 80 years ago, this independent company has an extensive sales and service network and is present in more than 70 countries. The electronics group is among the world market leaders in its established business fields. The company is headquartered in Munich, Germany. It also has regional headquarters in Singapore and Columbia, Maryland, USA, to manage its operations in these regions.
